Jairam Hegde

Bengaluru, Karnataka
+91 8217856526 | jairamhegde002@gmail.com | github.com/Jairamhegde

Professional Summary

Backend Developer skilled in building REST APIs using Python, FastAPI, and PostgreSQL. Experienced in integrating LLMs and AI APIs to build intelligent workflows and automate tasks, with hands-on experience in webhook integrations. Strong foundation in data structures, algorithms, and object-oriented programming, with experience in CI/CD using GitHub Actions. Focused on writing clean, maintainable code and building reliable backend applications.

Education

R V College of Engineering **Nov 2025 – Nov 2027 (Expected)**
Master of Computer Applications (MCA), CGPA: 8.68/10 *Bengaluru, Karnataka*

KLE Society's College of Computer Applications **Aug 2021 – Aug 2024**
Bachelor of Computer Applications (BCA), CGPA: 7.83/10 *Dharwad, Karnataka*

Technical Skills

Languages: Python, Java, JavaScript

Frameworks & Platforms: FastAPI, SQLAlchemy, React, AWS

Databases: PostgreSQL, SQL

AI & Tools: Gemini API, Prompt Engineering, Git/GitHub, GitHub Actions (CI/CD)

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, Multithreading & Concurrency

Projects

InternIQ – Job Market Intelligence Platform | *Python, FastAPI, PostgreSQL, React* | GitHub **Jan 2026**

- Built a job-market intelligence platform that scrapes Internshala daily and serves role demand, skill trends, salary ranges, and resume skill-gap analysis through a React dashboard.
- Automated a GitHub Actions ETL pipeline that stages 500–1,000+ postings in PostgreSQL, normalizes salaries across 4 currencies, and runs 10x faster after switching to bulk inserts.
- Built a hybrid rule-based and TF-IDF cosine-similarity classifier across 7 job domains at 96% accuracy, and cut API p95 latency by 53% by tracing requests with OpenTelemetry and Grafana.

ResolveOps – AI-Powered Slack IT Helpdesk | *Python, FastAPI, React, PostgreSQL, Gemini API* | GitHub **Jul 2026**

- Built an AI-triaged Slack IT helpdesk where employees raise tickets via slash commands, and Gemini 2.5 Flash assigns each a category, a P1–P5 priority, and a suggested fix.
- Implemented AI-driven ticket deflection that resolves low-priority issues through suggested fixes, routes the rest to 5 category admin queues, and auto-escalates SLA breaches every 15 minutes with APScheduler.
- Built a React and Recharts dashboard behind JWT login that tracks the AI deflection rate, secured Slack and GitHub webhooks with HMAC-SHA256, and wrote 17 pytest tests run in GitHub Actions CI.

Relevant Coursework

Generative AI & NLP: LLM architectures, prompt engineering, and GenAI security.

Cloud Computing: AWS EC2, S3, CloudFront, RDS, and VPC subnets.

Certifications

AWS Fundamentals – Amazon Web Services for Beginners (Infosys Springboard)

Python Essentials 1 (Cisco)
